

Espermaplus

Indications

Nutritional supplement specifically designed to ensure optimal intake of micronutrients and essential amino acids needed to maximize sperm production in boars of high genetic potential. Highly recommended in times of stress (high temperatures vaccinations, etc). Increases sperm quality and libido.

Two different ways to dosage this product are taking in account:

Dosage for treatment:

When we want to treat specifically a boar with problems, for example: high percentage of abnormal forms, days after vaccination

The treatment will be added placing the product as a "top dressing" in the feed once is dispensed in the feeder.

30 grams of Espermaplus per kilogram of feed intake. The most common is give 2.5 kg of feed per boar.

When we speak about treatment, the administration period we will recommend is 5-6 weeks.

Dosage for maintenance:

For boars with a high production rythmn, inadequate environmental conditions, etc.

15 grams of Espermaplus per kilogram of feed intake.

Two ways are contemplated:

- Summer period administer 30 g/kg starting in May and finishing on September.
- Use the product as a supplement 1 week per month 15 g/kg all year.
