

# Boliflash Calcium +

## DIETETIC MINERAL FEED FOR DAIRY COWS

**Particular nutritional purpose : Reduction of the risk of milk fever and subclinical hypocalcaemia**

### Instructions:

A dose of Boliflash Calcium + includes an effervescent bolus (disintegration within 1 hour) and a controlled-release bolus (less than 24hours) for fast and gradual intake of 52g of easily assimilated calcium. The dose is to be given at calving. The total nutritional bolus components are fully released in less than 24 hours after application.

#### ZOOTECNICAL BENEFITS :

- Provides 52g of calcium in one application.
- Reduce the risk of milk fever and subclinical hypocalcemia
- Dual speed assimilation: a boost effect thanks to the rapid dissolution of the effervescent bolus and then a progressive intake thanks to non-effervescent bolus
- Contains phosphorus and vitamin D3

#### INSTRUCTIONS FOR USE :

- Give one dose of Boliflash Calcium + (1 Effervescent bolus of 100g and 1 Controlled-release bolus of 100g) orally as soon as there are signs of calving or right after.
- Ensure a balanced nutrition.
- Preferably administer the bolus using bolus gun by a competent person or a veterinarian.
- Do not administer to a lying down animal. The opinion of a nutrition expert (or nutritionist) or a veterinarian should be sought before using feed or before extending its period of use.
- Do not open the packets in advance

**Analytical constituents:**

|                          | Effervescent bolus  | Controlled-release bolus   |
|--------------------------|---|--|
|                          | Calcium chloride (45 %), Calcium carbonate (17.6 %), Monobasic calcium phosphate (15 %), Bicalcic phosphate (5 %), Magnesium phosphate, Calcium chelates (1.8%), Organic carnauba wax | Calcium chloride (50 %), Calcium carbonate (17 %), Monobasic calcium phosphate (15 %), Bicalcic phosphate (5 %), Magnesium phosphate, Organic carnauba wax |
| Additives:               |   |  |
